

After a couple of months of waiting on material – and getting the time to do it, here is the finishing process for the new 2-Up seat pan.

Here, we have traced a template for the seat foam, and added a 1" gel pad.

After a few trial fits on the bike and adjustments made, we had a pretty close fit for the finished product.

Here is the factory seat beside the new seat unfinished.

Next – we made a pattern from old material so as not to mess up the good material. I chose stingray skins again, since that's kind of the theme of the bike.

We pop-riveted the cover to the pan – fiberglass is too hard for staples...

One final note: I covered the entire bottom with thin auto carpet to protect the paint from rivets. The rest is history!
